

Printer Compatibility Verification Page (Print this in each mode available)

Write the Printer, and mode used into the picture of the Print Dialog Box below.

Printer:	Port:
EPSON LQ-100	ON LPT1
Print Quality: <u> X </u> High	<u> </u> Medium <u> </u> Low (Fast)
<i>VERY SLOW!</i>	<u> </u> Text Mode Only

This document is printed in URW Mono, and some URW Roman. Following this line we will print several sizes of URW Mono:

This Line is in 12-pt (10-pitch) URW Mono. Every printer should print this OK

This line is in 7-pt (17-pitch) URW Mono. Small eh? On this line, the OK on the right margin should line up on the with the above OK

Back to 12-pt, so we make sure we can read this. The following section will run through some style changes:

Plain	Bold	<i>Italic</i>	<u>Underline</u>	StrkThru	SubScript	SuperScript
Bold	Bold	<i>Italic</i>	<u>Underline</u>	StrkThru	SubScript	SuperScript
<i>Italic</i>	Bold	<i>Italic</i>	<u>Underline</u>	StrkThru	SubScript	SuperScript
<u>Underline</u>	Bold	<i>Italic</i>	<u>Underline</u>	StrkThru	SubScript	SuperScript
Strkthru	Bold	<i>Italic</i>	<u>Underline</u>	StrkThru	SubScript	SuperScript

(Not all printers are capable of all these styles in Text Mode Only)

This paragraph is in a proportional font to make sure that the printer gets put into a mode capable of fitting this all on a page without losing information. It should be printed in 17 pitch.

Here is some proportional text to test the printer's proportional capability.

Back to 10-pitch fixed for a change of pace, and back into proportional. The following lines are here to test Graphic Mode Printing, and will look small in Text Mode Only:

Roman 100pt.

Roman 50pt ! Roman 36pt !
